

LIMI Mobile App — Tasks by Date

Sirf **mobile app** se related. Source: WhatsApp/group screenshots (OCR + visual). Har item: **un ka message** → **aap ka response** → **kaam hua ya nahi** (DeviceApp codebase + app screenshots).

Important: Screenshots mein Ali/Arqam ke naam se labeled bubbles almost nahi. Jahan naam clear nahi, speaker = **Unlabeled (Ali ya Arqam — confirm nahi)**. Invent nahi kiya. PCBA/firmware/WeChat Jerry messages exclude.

1) 2026-06-08 — Limi group (Umer, Ali) — Architecture confirm

Source: IMG-20260608-WA0022 / WA0024. Group members include **arqam** + Ali. Grey bubbles = leather-jacket avatar — **naam print nahi** (Ali ya Arqam).

Item A — Stack definition (app + ESP32)

Field	Detail
Speaker	Unlabeled (Ali ya Arqam — confirm nahi)
Actual message(s)	• Isn't that all we do? • Both esp32 and app look at server • With Mqtt • And a database on cloud holds values for sync • So in total 3 parts • Just to confirm am I correct / Is that what our stack is • A database and Mqtt / Or are we only using Mqtt • Mqtt is already web socket
Aapka response	running the MQTT messaging protocol on top of WebSockets
Kaam hua?	HAAN (largely) — DeviceApp: MQTT/cloud path (Socket.IO MQTT bridge), LAN WebSocket, BLE transport, cloud sync presence. App + board both talk via server/MQTT model implemented. Cloud DB sync for virtual devices present (API errors sometimes — duplicate key).

Item B — Same thread (Suzair, not Ali/Arqam)

Field	Detail
Speaker	~ Suzair Khan (Ali/Arqam nahi)
Actual message	I will do it today, once i able to connect to server. / I will fix all the issues and add monitoring externally
Aapka response	Is screenshot frame mein is pe aapka reply nahi (aapka MQTT/WS reply upar wale speaker ko hai)
Kaam hua?	N/A for Ali/Arqam scoring — Suzair ka server/monitoring kaam

2) 2026-07-14 — Arqam / TestFlight (app distribution)

Source: IMG-20260714-WA0011 / WA0013 — App Store Connect TestFlight

Field	Detail
Speaker	Arqam bhai — koi chat message text nahi ; sirf group naam
Actual “message” / evidence	External testing group name: argam / arqam bhai testing Public TestFlight link present; testers invited (umer, karen...)
Aapka response	Chat reply nahi — aap ne TestFlight build/group setup dikhaya
Kaam hua?	HAAN (distribution side) — iOS app TestFlight pe external group Arqam testing ke naam se. Arqam ke taraf se written feature-task list is date pe screenshots mein missing .

3) 2026-07-20 — Control path / MQTT testing mode (app UI evidence)

Source: IMG-20260720-WA0005 etc. Ye **instruction chat nahi** — app screenshots. Likely pehle ke MQTT stack direction ka follow-through.

Field	Detail
-------	--------

Speaker	N/A (UI shot; Ali/Arqam quote nahi)
Related requirement	App MQTT (cloud) control path; Testing mode — commands always use MQTT; device detail shows WebSocket transport badge
Aapka response	N/A chat — aap ne build share ki / UI dikhai
Kaam hua?	HAAN — Control path picker (Automatic / MQTT / LAN WS / BLE) + MQTT testing mode UI present in DeviceApp

4) 2026-07-28 — Offline / local switch architecture (app)

Source: Screenshot_2026-07-28_at_16.54.37 / 16.54.56 / 16.55.21 + IMG-20260728-WA0013. **Speaker name print nahi** — whiteboard/architecture (group discussion). Mobile-app tasks clearly defined.

Item A — SECOND CASE (board MQTT down → WS/BLE)

Field	Detail
Speaker	Unlabeled (diagram — Ali/Arqam assign confirm nahi)
Actual requirement text	whenever boards disconnects from mqtt and broadcasts ble/ws then it sends status on via WS. App↔Board via WS when cloud path broken; app↔cloud command path marked off in that case.
Aapka response (chat)	Is frame mein green-bubble reply nahi — diagram share / implement
Kaam hua?	HAAN (largely) — LAN WebSocket client, BLE writer, presence/offline coordinators, transport registry MQTT→local fallback logic in Core/Services/Transport/

Item B — Cloud disconnect modal + WS/BLE check

Field	Detail
Speaker	Unlabeled (same diagram set)
Actual requirement text	App and Board disconnected from cloud (no internet) → check if ws/ble is on? yes → Show modal: “your device is not connected to the cloud do you want to switch over local network / BLE control” yes/no. no → No action. Also: APP disconnected from socket from Cloud; BLE advertised.
Aapka response (chat)	Chat reply nahi; Aug 5 screenshot mein same modal live dikhta hai
Kaam hua?	HAAN — CloudOfflineLocalSwitchCoordinator + alert: “Your device is not connected to the cloud. Do you want to switch over ... control?” + LocalNetworkAllowStore on Yes

Item C — Local discovery / provisioning flow notes

Field	Detail
Speaker	Unlabeled
Actual requirement text	IP ranges mapped board1–4 (192.168.18/180/100/10). Check same network; BLE advertised; SSID/password to board; board returns WS URL/IP; save WS URL + device ID for BLE control.
Aapka response	Chat reply nahi
Kaam hua?	PARTIAL / HAAN mostly — Wi-Fi provisioning + Bonjour/LAN discovery + configured BLE store + local IP shown in Add Device (Aug 26 shots: 192.168.18.x). Hardcoded 4 subnet→board map as diagram — app uses discovery, not fixed board1–4 table.

5) 2026-08-05 — Same offline modal live in app

Field	Detail
Speaker	N/A (app UI proof of Jul 28 requirement)
Evidence	Modal: Cloud Disconnected — Your device is not connected to the cloud. Do you want to switch over local network / BLE control? No / Yes
Aapka response	N/A — implementation proof

Kaam hua?	HAAN — Jul 28 modal requirement shipped
-----------	---

6) 2026-08-10 onwards — Home UI / MQTT testing / BLE+LAN (evidence)

WhatsApp_Image_2026-08-10 + later screenshots. Explicit Ali/Arqam quotes missing; app state shows MQTT testing mode, BLE/LAN online, virtual master, schedules tab.

Field	Detail
Speaker	Ali/Arqam labeled task text: nahi mila
Related app work visible	Home UI overview, rooms, Control path Automatic/MQTT/LAN/BLE, Add Device BLE+LAN IPs, Virtual Devices / Master Device, Schedule tab, splash/sign-in
Aapka response	N/A chat — builds/screens shared
Kaam hua?	HAAN mostly for transport + home + virtual grouping. Schedules UI = present, depth unknown from shots. Virtual cloud sync = sometimes HTTP 400 duplicate key (backend issue).

7) 2026-08-11 — “what is the mobile update” (NOT Ali/Arqam)

Field	Detail
Speaker	Suzair Khan (ops draft) — Ali/Arqam nahi
Actual message	what is the mobile update
Suggested / aapka side	LIMI AI Device - Home UI 1 - Done; Room/group light control - Done; QA transport testing (Device) - In review
Kaam hua?	Status reply ke mutabiq Done / In review — Ali/Arqam task list nahi

Summary — Ali vs Arqam (mobile app only)

Person	Clear labeled app tasks?	Date-wise what we can score
Ali bhai	Naam-labeled bubble: NO in these shots	Possible ownership of 08 Jun stack Qs + Jul 28 diagrams — unconfirmed . App work vs those requirements: largely YES.
Arqam bhai	Chat instruction text: NO	14 Jul TestFlight group “arqam bhai testing” only. Same unlabeled Jun 8/Jul 28 could be him — unconfirmed.

Bottom line: Mobile-app ke liye screenshots se **dated, quotable** tasks mainly **08 Jun 2026** (MQTT/app↔server/cloud DB) aur **28 Jul 2026** (offline modal + WS/BLE fallback). Speaker Ali vs Arqam alag-alag naam se prove nahi. Un requirements ke against aapka/AI DeviceApp kaam **mostly done**. Arqam ke alag written feature tickets is dump mein nahi.

Agar Ali/Arqam ke naam wale aur chats hain, un screenshots do — date + exact quote + aapka reply fill kar denge.
